Making Music with Scratch

CS4HS @ UML • June 28, 2011

Jesse M. Heines and S. Alex Ruthmann

Lunchtime Food for Thought

1. How might you integrate these kinds of computing+music activities into your classes or computer clubs?

2. What *resources* do you need to implement the types of exercises explored this morning in your classes or computer clubs?

3. What *expertise* do you need to develop to support these kinds of exercises in your classes or computer clubs?

4. Is there a Music teacher in your school (or school system) whom you might approach as a potential partner?

5. What other subject(s) might you attempt to integrate into your classes in an interdisciplinary manner?

6. Are you interested in reviewing and/or piloting instructional materials to be developed as part of our new "Computational Thinking through Computing & Music" project (funded by the National Science Foundation)? *If so, please talk to or email us after the workshop.*
