**Subject:** Re: Request for Licenses for Incarcerated People

Hello Jesse,

Thank you for your response. Sure, we do support some locking mechanisms via the registry, with one for the Run DOS/Windows Program. By default no locks are set, but you can set locks as DWORD values under the key:

HKEY\_CURRENT\_USER\Software\IDM Computer Solutions\UltraEdit\Locks\

The DWORD values are:

```
FTP=1 ; locks FTP
DOSWIN=1 ; locks Dos/Windows program running
ToolsCfg=1 ; locks Tool Configuration
Browser=1 ; locks viewing files in the browser
Macros=1 ; locks macro functionality
RevertToSave=1 ; locks Revert to Save
Compare=1 ; locks File Compare
Conversions=1 ; locks all items in Conversion Sub-menu
FileSpecial=1 ; locks File Special Sub-menu features
QuickOpen=1 ; locks Quick Open
SaveAs=1 ; locks Save As and Save Selection As
Projects=1 ; locks all project functions
HexEdit=1 ; locks HEX Editing
SpellChecker=1 ; locks Spell Checking
Lists=1 ; locks all lists from view menu
Colors=1 ; locks color selection
Formatting=1 ; locks Reformat Paragraph and convert wrap/crlf's
Column=1 ; locks column mode functions
Configuration=1 ; locks Configuration
Templates=1 ; locks templates functions
AddHelp=1 ; locks Add Help function
ReadOnly=1 ; locks Read Only
Updates=1 ; locks Check for Updates
Explorer=1 ; locks Explorer tab of File Tree View
```

I just verified that the "**DOSWIN**" lock does work for me in the latest version.

Thanks,

Ben Schwenk  
Product Manager
